

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	28 September 2026
Team ID	SWTID-2026-2588
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The proposed system is implemented using the **ServiceNow platform**. Students or teachers create IT support tickets through the ServiceNow user interface. The ticket is stored in the custom **Incident Workflow** table. When a new record is created, **Flow Designer** automatically evaluates the Short Description using predefined keyword conditions.

Based on the identified keywords, Flow Designer updates the appropriate **Category** and **Subcategory**. After classification, an automated email notification is sent to the caller.

Classification Logic

Input Keyword	Category	Subcategory
Wi-Fi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Password / Login	Access	Forgot Password
Slow / Hanging	Performance	Slow Computer

Table-1: Application Characteristics:

S.No.	Characteristics	Description	Technology
1	Open-Source Frameworks	No external open-source framework is required for the core implementation. The solution uses ServiceNow's built-in platform capabilities.	ServiceNow Platform / Flow Designer
2	Security Implementations	Access to ticket records and configuration is controlled using ServiceNow roles, permissions and access controls. User information and ticket data are managed within the ServiceNow platform.	ServiceNow Roles, ACLs, Authentication & Access Controls
3	Scalable Architecture	The solution is designed to process multiple ticket records automatically. Additional categories, subcategories and classification conditions can be added to the flow as requirements grow.	ServiceNow Flow Designer & Platform
4	Availability	The application is hosted on the ServiceNow platform, allowing authorized users to access the ticketing system through the platform when the ServiceNow instance is available.	ServiceNow Cloud Platform
5	Performance	Automated classification reduces repetitive manual processing. Flow Designer evaluates the ticket when it is created and updates the relevant fields automatically.	Flow Designer / ServiceNow Automation

Technology Stack Summary

Front End / User Interface

ServiceNow User Interface + ServiceNow Forms

Application / Automation

ServiceNow Flow Designer

Database

ServiceNow Custom Table – Incident Workflow

Classification

Rule-Based Keyword Matching

Notification

ServiceNow Email Notification / Flow Designer Send Email Action

Security

ServiceNow Roles + ACLs + Authentication

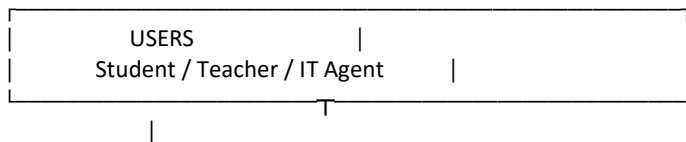

Deployment

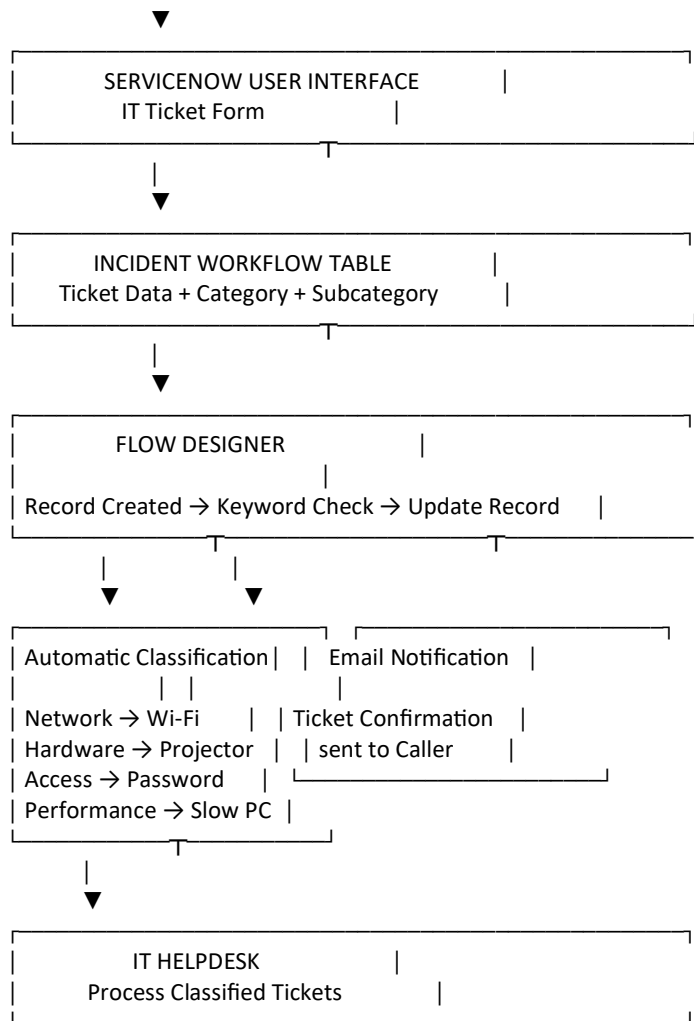

ServiceNow Update Sets

Hosting

ServiceNow Cloud Platform

Overall Architecture

Architecture Type

Platform-based cloud architecture with automated workflow processing.

The project does **not** require a separate frontend framework, backend programming language, external API, machine-learning model, or separate database because these capabilities are provided through the ServiceNow platform and its built-in Flow Designer automation.
