Empathy Map Canvas:

User Persona 2: IT Helpdesk Agent

SEE

- Multiple incoming IT support tickets.
- Different types of technical problems.
- Tickets requiring manual category and subcategory selection.
- Increasing ticket volume during busy periods.
- Tickets that need to be routed to the appropriate support team.

THINK & FEEL

- "I need to classify each ticket correctly."
- "There are too many tickets to process manually."
- "Manual classification can cause mistakes."
- "I need to focus more on resolving issues rather than categorizing tickets."
- Feels overloaded when ticket volume increases.

HEAR

- Students reporting Wi-Fi problems.
- Teachers reporting projector failures.
- Users requesting password resets.
- Complaints about slow or hanging computers.
- Requests for faster IT support.

IT Helpdesk Agent

SAY & DO

- Reviews the Short Description and Description.
- Identifies the type of technical problem.
- Selects the appropriate Category and Subcategory.
- Routes tickets to the appropriate support team.
- Responds to students and teachers.
- Resolves and updates tickets.

PAINS

- Manual classification takes time.
- Incorrect category selection may occur.
- Large ticket volumes increase workload.
- Repetitive classification tasks reduce productivity.
- Tickets may be routed incorrectly.

GAINS

- Automatic ticket classification.
- Correct Category and Subcategory selection.
- Reduced manual workload.
- Faster ticket routing.
- Consistent ticket data.
- More time to focus on resolving technical issues.
