

Functional & Performance Testing

Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-2588
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Incident/Ticket Creation	Create a new incident in the Incident WorkFlow table and enter caller, short description, and description.	Ticket should be created successfully with the entered details.	Ticket created successfully.	Pass
FT-02	Wi-Fi Ticket Classification	Create a ticket with "Wi-Fi" or "WiFi" in the description.	Category should be Network and Subcategory should be Wi-Fi.	Ticket classified as Network → Wi-Fi.	Pass
FT-03	Projector Ticket Classification	Create a ticket containing "Projector" in the description.	Category should be Hardware and Subcategory should be Projector.	Ticket classified as Hardware → Projector.	Pass
FT-04	Password/Login Classification	Create a ticket containing "Password" or "Login".	Category should be Access and Subcategory should be Forgot Password.	Ticket classified as Access → Forgot Password.	Pass

FT-05	Slow Computer Classification	Create a ticket containing "Slow" or "Hanging".	Category should be Performance and Subcategory should be Slow Computer.	Ticket classified as Performance → Slow Computer.	Pass
FT-06	Email Notification	Create a ticket with a valid caller email address and allow the flow to execute.	An email notification should be sent to the caller after classification.	Email notification sent successfully.	Pass
PT-01	Flow Execution Performance	Create a new ticket and observe the time taken for the Flow Designer automation to classify it.	Classification should be completed automatically without noticeable delay.	Classification completed automatically.	Pass
PT-02	Multiple Ticket Processing	Create multiple incident tickets with different keywords and allow the flow to process them.	Each ticket should be classified according to its corresponding keyword without affecting other tickets.	Multiple tickets processed and classified correctly.	Pass
PT-03	Data Validation Test	Enter ticket details and verify Category, Subcategory, State, Assigned Group, and other fields after flow execution.	Required fields should contain valid and consistent values after classification.	Data stored correctly after classification.	Pass
