

Project Development Phase
Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-2588
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Values
1	Automation Summary	Flow Designer automatically classifies newly created incident tickets based on keywords in the Short Description/Description. The system assigns the appropriate Category and Subcategory and sends an email notification to the caller.
2	Accuracy	Classification Accuracy – To be calculated based on the number of test tickets correctly classified by the Flow Designer. Formula: $\text{Correctly Classified Tickets} / \text{Total Test Tickets} \times 100$
3	Fine Tuning Result (if Done)	Not Applicable – The project uses a keyword-based Flow Designer automation and does not involve machine-learning model training or fine-tuning. Keyword conditions and flow logic can be modified when required.
