

Project Development Phase

Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-2588
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5

Model Performance Testing:

S.No	Parameter	Values	Screenshot
1	Model Summary	ServiceNow Flow Designer automation for automatic ticket classification. The system classifies newly created IT tickets based on keywords in the Short Description/Description. Wi-Fi → Network/Wi-Fi; Projector → Hardware/Projector; Password/Login → Access/Forgot Password; Slow/Hanging → Performance/Slow Computer. Note: This is a rule-based keyword classification system, not an ML-trained model.	
2	Accuracy	Functional Classification Accuracy = $(\text{Correctly Classified Tickets} / \text{Total Test Tickets}) \times 100$. Accuracy is measured using functional test cases rather than Training/Validation Accuracy because no machine-learning model is trained.
