Customer Problem Statement

PS-1
Student / Teacher

IT Support Ticket

I am (Customer)
I am a student or teacher who needs IT support.

I'm trying to
I'm trying to report my IT issue quickly and correctly.

But
But I have to provide or wait for manual category and subcategory selection.

Because
Because the helpdesk currently reviews and classifies tickets manually.

Which makes me feel
Frustrated and delayed when my issue is not classified quickly.

PS-2
IT Helpdesk Agent

#1042: Wi-Fi Issue
 #1043: Projector
 #1044: Login Issue
 #1045: Slow Computer

I am (Customer)
I am an IT helpdesk agent.

I'm trying to
I'm trying to process and route support tickets efficiently.

But
But I have to manually identify the issue type and select the appropriate category and subcategory.

Because
Because incoming tickets are not automatically classified based on their descriptions.

Which makes me feel
Overloaded and concerned about classification errors.

PS-3
School IT Administrator

IT Tickets

I am (Customer)
I am a school IT administrator.

I'm trying to
I'm trying to maintain a consistent and efficient ticket management process.

But
But ticket classification can be inconsistent and time-consuming.

Because
Because the classification process depends on manual intervention by IT staff.

Which makes me feel
Concerned about efficiency and scalability as ticket volume increases.

PS-4
Ticket Confirmation

Your ticket has been submitted!

I am (Customer)
I am a student who has submitted an IT ticket.

I'm trying to
I'm trying to know whether my support request has been successfully received.

But
But I may not receive immediate confirmation after submitting the ticket.

Because
Because email notification is not automatically triggered for every newly created ticket.

Which makes me feel
Uncertain about whether my request was received.

Selected Core Problem Statement

School students and teachers need a simple and efficient way to report IT issues, while IT helpdesk agents need to classify and route tickets quickly. However, manually identifying the category and subcategory of every ticket is time-consuming and may lead to inconsistent classification. Therefore, an automated Flow Designer solution is required to classify IT tickets based on keywords in the ticket description and notify the caller automatically.

Selected Core Problem Statement
